

COMPANY OVERVIEW

Infinite Data INTELLIGENT SOLUTIONS

Custom software development, data security, and network infrastructure design and deployment, delivered by one accountable team.

SeptiBytes Solutions is a partner led engineering practice. Our partners carry years of delivery behind them in health risk administration, enterprise integration and multi site infrastructure. We put three disciplines under one roof so the application, the data it holds and the network it travels on are designed together, and we own two products built for industries we know well.

Custom software development

Platforms, mobile and field apps, integration, automation and data products.

Network infrastructure

Design, cabling, firewalls, cloud connectivity and managed support.

CultiBytes

Smart farming on the farm's own data, offline capable in the field.

Data security

Architecture, access control, encryption, testing, monitoring and governance.

Artificial intelligence

Document understanding, anomaly detection, forecasting and decision support.

MedicalBytes

Health risk administration from policy through claims to provider payment.

HOW WE ENGAGE

Fixed scope delivery, a dedicated squad, staff augmentation or a managed service. Product licences are per member per month for MedicalBytes and per farm or per hectare for CultiBytes. You own the source code, the data model and the documentation.

WHO IT IS FOR

Financial services · Health risk · Agriculture · Public sector · Multi site operations
