

SERVICE DATASHEET

Custom Software DEVELOPMENT

Enterprise platforms, mobile and field apps, integration, workflow automation and data products, built around your process.

We build business software end to end, from the first workshop through to the version running in production two years later. Short, visible delivery cycles mean you see working software every fortnight rather than waiting months for a reveal. You own the source code, the data model and the documentation.

Enterprise web platforms

Line of business systems, portals and internal tools for daily operational use.

Integration and modernisation

API design, systems integration and careful replacement of ageing platforms.

Data platforms and reporting

Warehousing, pipelines, operational reporting and executive dashboards.

Mobile and field apps

Android and iOS, including offline capable tools that sync when coverage returns.

Workflow and rules automation

Approval chains, rules engines and document workflows that remove manual handling.

Teams and support

Dedicated squads, maintenance retainers and second line support after go live.

TECHNOLOGY

C#/.NET, Python, JavaScript and TypeScript, Java, SQL, Kotlin, Swift · React, Angular, Blazor, Next.js · ASP.NET Core, FastAPI, Django, Node.js, Spring Boot · SQL Server, PostgreSQL, MongoDB, Redis, Power BI · Azure, AWS, Docker, Kubernetes, CI/CD · Anthropic and OpenAI APIs, TensorFlow, PyTorch, OCR and document AI, vector databases

WHO IT IS FOR

Mid market and enterprise operations · Financial services · Health · Agriculture · Public sector
