

SERVICE DATASHEET

Network Infrastructure DESIGN AND DEPLOYMENT

Design, structured cabling, switching, firewalls, cloud connectivity and managed support, surveyed and documented.

We design, install and support the physical and virtual infrastructure that carries your business. Every deployment is surveyed, labelled, tested and handed over with drawings you can give to the next engineer. An elegant application on an unsegmented network is a breach waiting to happen.

Network design

Campus, branch and multi site topologies sized for current load and planned growth.

Perimeter and segmentation

Firewalls, VLAN segmentation, VPN and zero trust access for hybrid teams.

Compute and storage

Server, storage and virtualisation build outs, on premise or hosted.

Cabling and hardware

Cabling, switching, routing and wireless, installed, certified and labelled.

Cloud and hybrid

Secure links into Azure and AWS, hybrid identity and site to cloud routing.

Monitoring and support

Proactive monitoring, capacity planning, patching and a defined response window.

VENDORS

Cisco, MikroTik, Ubiquiti, Fortinet, VMware, Hyper V, Windows Server, Linux. Vendor neutral, specified to fit the site rather than a preferred supplier list.

WHO IT IS FOR

Multi site operations · Branch networks · Manufacturing and logistics · Health facilities · Estates and farms
